

# TRAINING

Denver Wire Rope and Supply offers a wide range of helpful classes, from a 15-30 minute “toolbox” type class, to a full day class including practical and written examinations.

A 5-6 hour class,  
***Qualified Rigger and Signal Person***,  
fulfills the OSHA requirement outlined in  
OSHA 1926.1400 for riggers on a construction site.

A few of our popular subjects covered include:

- *Criteria for rejection for the 3 popular sling types*
- *Mobile crane hand signals*
- *Overhead crane hand signals*
- *Inspection and safe usage of overhead cranes*
- *Usage and inspection of manual hoists*
- *Hitch types and effect of angles*

Our classes include plenty of hands on opportunity, with many samples and examples, sure to keep the students attention.

We often modify our basic classes to include specific areas of interest for you, the customer, to make sure your specific training requirements are met.

Classes are offered where they make the most sense, our location in Denver, or your location or job site, as necessary.

Give us a call to discuss your specific training needs.
